## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## **DETAILED ACTION**

### ***Claim Objections***

1. Claim 17 is objected to because of the following informalities: there is a lack of antecedent basis for “the second washer assembly”. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Zetti, US Patent 6,374,459. A hinge comprising an elongated bracket (8, 21) adapted to be securely connected to a display or like device; at least one fixing seat 2 pivotally connected to the bracket and having two pairs of through holes (18, 19) respectively defined in a top portion and a bottom portion of the fixing seat; at least one base 32 adapted to be securely connected to a support and having two upright walls each having a first pivot hole and a second pivot hole (34, 36) and a shaft

securely sandwiched between the two upright walls (see figure 4, near 33); at least one first arm 33 having a first end pivotally connected to the first pivot holes of the two upright walls and a second end pivotally connected to one of the two pairs of through holes; and at least one second arm 3 having a first end pivotally connected to the second pivotal holes of the two upright walls and a second end pivotally connected to the other pair of the two pair of through holes of the fixing seat such that the display attached to the bracket is able to have height and angle adjustment. The arms are constructed as claimed, each having two arms and a bridge section.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zetti. Zetti discloses a spring element 4. Zetti discloses the claimed invention except for the spring being oriented in the claimed manner. It is well known in the art of hinges of this type to arrange spring elements in variety of ways, to achieve a desired biasing force. It would have been obvious to one having

ordinary skill in the art at the time the invention was made to modify the device is such a way as claimed, since it has been held that rearranging parts of an invention involves only routine skill in the art. *In re Japikse*, 86 USPQ 70. Such a modification is not critical to the design and would have produced no unexpected results.

6. Claims 5-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zetti. Although Zetti does not explicitly teach the claimed washer elements, the examiner serves Official Notice that it is well known in the art of hinges to utilize such washer elements in the claimed manner, for the purpose of controlling motion of the hinge by tension and friction forces. It would have been obvious at the time the invention was made for one skilled in the art to have included in the design of Zetti such a modification, for the purpose of controlling motion of the hinge by tension and friction forces.

***Allowable Subject Matter***

7. Claims 12-19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
